STAFF TRAINING MANUAL

School ERP

Every school process, step by step: what to open, what to click, what to check, and what to avoid. For administrators, teachers and accountants, and for the trainer running the sessions.

Covers: setup, admissions, students, attendance, exams, fees, staff and payroll, library, transport, hostel, inventory, certificates, the parent and student portal, messaging and year end.
Use it with the demo data (`npm run seed:demo`) so nobody practises on real records.

START HERE

Contents

Part 1: How to use this manual, roles, and signing in

Part 2: Finding your way: menu, search, popups, and what happens when you delete

Part 3: Setting up the school (admin)

Part 4: Admissions: enquiry to enrolment

Part 5: Students: records, logins, documents

Part 6: Academics: subjects, electives and timetable

Part 7: Daily teaching: attendance, leave and alerts

Part 8: Exams: marks, results and report cards

Part 9: Fees and payments (accountant)

Part 10: Staff and payroll

Part 11: Library

Part 12: Transport

Part 13: Hostel

Part 14: Inventory

Part 15: Certificates and ID cards

Part 16: Parent and student portal

Part 17: Messages, notices and alerts

Part 18: Year end: promotion

Part 19: Routine, backups and when something looks wrong

Part 20: The mobile app for parents, students and teachers

Part 21: Connecting schools to the app (administrator and IT)

Part 22: Trainer's plan, exercises and sign-off sheet

Each part starts on a new page and is labelled with its part number at the top. The page number is in the footer.

PART 1

How to use this manual, roles, and signing in

How each process is laid out

Every process has the same parts, so you can find your way quickly:

PART	WHAT IT TELLS YOU
Who / Where	Which role does it, and which menu entry opens it.
Before you start	What must already exist. Most "it will not let me" problems are a missing earlier step.
Steps	Numbered, in order.
Check it worked	What you should see afterwards.
Watch out	The rules the system enforces, so a refusal does not surprise you.

The people and what they can do

ROLE	DOES	CANNOT DO
Administrator	Everything: admissions, students, academics, staff, settings, users, backups.	Nothing is closed to an admin.
Teacher	Attendance and marks for their own classes and subjects, homework, library, requesting inventory. Can read most other screens.	Fees, admissions, staff records, settings.
Accountant	Fees, fee structure, payments, finance reports, preparing payroll.	Approving a payroll payment (admin only), admissions.
Parent	The Parent Portal for their own children: fees, attendance, results, timetable, notices; applies for leave; asks for certificates.	Any staff screen.
Student	A read-only portal for their own record; can apply for leave.	Everything else.

The menu only shows what your role may open. If a menu entry is missing, it is not meant for your role. Your administrator can also create custom roles, for example a Librarian who only sees the library.

Signing in

1. Open the school's address in a browser (during setup this is **http://localhost:5173**).
2. Type your email and password and press the sign-in button.
3. If you were given a **temporary password** (new student accounts and new teacher logins always are), the system asks you to change it first. Nothing else works until you do. Choose at least 8 characters, different from the temporary one.
4. To leave, use **Logout** at the bottom of the left menu. Do this on shared computers.
5. **On a phone,** students, parents and teachers use the school app instead and sign in with their **mobile number** (see Part 20).

WATCH OUT

Too many wrong passwords locks sign-in for that email for 15 minutes. Do not keep trying; ask the administrator to reset the password.

BEFORE GOING LIVE (ADMINISTRATOR)

Change the starting admin password (`admin123`) and the secret key in the server settings. Anyone who has seen the example file knows them.

PART 2

Finding your way

The screen

- **Left menu:** one group per area (Admissions, Students, Academics, Fees & Finance and so on). Click a group to open its pages.
- **Top bar:** a search box, a theme button (light, dark or follow your device), and your name with Logout.
- **Page header:** the page title and the main action on the right, for example `+ New enquiry`.
- **Summary tiles** under the header count what is on the page. They are a quick health check: if a tile looks wrong, something needs attention.
- **Tabs** (All, New, Follow-up, Converted and so on) show a slice of the list, each with a count.
- **Search and filters** narrow the table. Type a name, a phone number or an ID. Every word you type must match.

Handy shortcuts

`Ctrl` + `K`	Jump to any page you may open, find a student by name, switch theme, or sign out.
Type-ahead boxes	Wherever a form needs one student or one staff member you get a search box, not a long list. Type part of the name, admission number or phone and pick from the results.
`Esc`	Closes a popup. If you typed something, the system asks before throwing it away.

Popups and forms

Most "add" and "edit" forms open as a popup over the list. Fields marked ***** are required. A red message at the top of the popup tells you what to fix. Clicking the dim background does not close a popup, so you cannot lose work by accident.

What happens when you delete

> **SOFT DELETE**
> Nothing important disappears at once. A deleted record is hidden and remembered, with who deleted it and when. Enquiries even have a **Deleted** tab where you can **Restore** them. Only an already-deleted enquiry can be removed permanently.

- A student with a certificate request cannot be deleted. Mark the student **inactive** instead.
- Staff with payslips, reviews or documents cannot be deleted. Mark them inactive.
- A fee that has any payment cannot be deleted. Use a discount or fine to change what is owed.
- An issued certificate can never be deleted; it is part of the register.

Everything is recorded

Every create, change and delete is written to the **Audit log** with the person and time. Saved attendance that is corrected keeps the old value, the new value and the reason. Work as if your name is on every change, because it is.

PART 3 · ADMINISTRATOR

Setting up the school

Do these once, in this order. Later processes read what earlier ones create: you cannot enrol a student into a class that does not exist, or bill a fee that has no structure.

School profile → Academic year → Master data → Classes → Subjects & map → Staff → Fee structure → Timetable → Users

WHO	WHERE	TIME
Administrator	Settings, Academics, Staff & HR, Fees & Finance, User Management	About 4 to 6 weeks for a whole school

3.1 School profile

1. Open **Settings** → **School Profile**.
2. Edit the name, code, board, contact details, principal and motto. Upload the logo as a PNG or JPEG up to 1 MB.
3. Set the **current academic year** here or under Academic Years. Save.

CHECK IT WORKED
The school name and logo now appear on the sign-in page, in the header, and on every printout (receipts, report cards, ID cards, certificates).

3.2 Academic year and campus

1. **Academics** → **Academic Years**: add the year (for example 2026-2027) and make it current.
2. **Settings** → **Branches**: the first campus is the main one. Add more only if the school has more.

3.3 Master data (the dropdown lists)

1. Open **Settings** → **Master Data**.
2. Review religion, category, nationality, mother tongue, state, relation, occupation, qualification and marital status. Rename, hide or reorder as the school needs.
3. Open the three **document lists** (Application documents, Student documents, Staff documents). Tick **Required** on each document the school insists on, for example birth certificate and address proof.

WATCH OUT
An application cannot be submitted until every **required application document** is uploaded. Decide these carefully before admissions open.

3.4 Classes and sections

1. Academics → Classes & Sections → add a class with its name (for example Grade 5) and section (A).
2. Add the room and, when staff exist, the class teacher.

Name plus section must be unique. "Grade 5 A" cannot be created twice.

3.5 Subjects and the subject map

1. Academics → Subjects: add each subject once.
2. Academics → Subject Map (or Class Map): for each class add its subjects.
   - **Core** subjects are taken by everyone; **elective** subjects belong to a group (for example "Second language") and each student takes one.
   - Choose **theory**, **practical** or **both**. For both, set the practical share (30% of 100 marks means 70 theory plus 30 practical).
   - Set periods a week and the teacher.

> **CHECK IT WORKED**
> The **Class map** page shows one class at a glance: teacher, subjects, fees, activities, transport and hostel. The **Setup guide** in Help ticks each step from real data and shows what a class still lacks.

3.6 Staff and teacher logins

1. Staff & HR → Departments and Designations: add the lists first.
2. Staff Directory → register each staff member (see Part 10).
3. User Management → Users: create a login for each teacher. **The login email must be exactly the same as the email on the staff profile.** That is how the system knows which classes and subjects belong to the teacher.
4. On Classes, pick the staff member as **class teacher**. The teacher then gets a **My Class** page.

3.7 Fee structure

1. Fees & Finance → Fee Types: tuition, transport, lab and so on.
2. Fee Structure: for each class add its fee items with amount and due date.
3. Optional: Fee Groups are reusable bundles (for example "Uniform pack") that a family can choose at admission.
4. Settings → **Payments**: receipt number prefix, which payment methods are accepted, whether part payments are allowed.

3.8 Timetable

1. Academics → Class Timetable: choose a class and place subjects into days and periods with teacher and room.

A room cannot serve two classes at the same time, and one-off room bookings cannot clash with lessons. Completion is measured against the periods the subject map asks for.

3.9 Loading many records from a spreadsheet

1. `Settings` → `Data Import / Export`.
2. Pick what you are loading. The order that works is: classes, subjects, departments, designations, staff, curriculum, fee types, fee structure, books, students.
3. Download the **template**, fill it in (the example row shows the format), and upload it.
4. First the system **checks every row** and lists every problem in plain words. Fix the file and upload again. Only a file with no problems is imported, all in one go.

> **SAFE TO REPEAT**
> Rows already in the system are reported as "already there" and skipped, so you can re-upload a corrected file without creating duplicates. Logins, parent accounts and the timetable are not imported on purpose: they involve passwords and decisions.

PART 4 · ADMISSIONS OFFICER (ADMINISTRATOR)

Admissions: enquiry to enrolment

Enquiry → Application → Under review → Assessment → Offer → Enrol → Student

One admissions record follows the family the whole way. Nothing is typed twice, and everything collected moves to the student when you enrol.

WHO	WHERE	BEFORE YOU START
Administrator	Admissions group in the menu	Classes, academic year, required documents, fee structure

4.1 Record an enquiry

1. Admissions → Admission Enquiries → + New enquiry.
2. Fill the four sections: **student**, **parent**, **enquiry details** (grade applying for, and where the enquiry came from: website, walk-in, phone, referral, social media or other) and **follow-up plan**.
3. Save. The enquiry gets a number like **ENQ-2026-0012**.

Enquiries from the school website's **/apply** form arrive here automatically, marked as online.

4.2 Follow up

1. Open the row's menu and choose to **plan a follow-up or visit**. Pick the date, the way you will contact them and a note.
2. When the date arrives, the enquiry moves to the **Follow-up** tab and the "Needs follow-up" tile counts it.
3. After you call, record the outcome. A campus visit date shows in the "Visits scheduled" tile.

4.3 Start the application

1. On the enquiry row click Apply, or open Admissions → Admission → New admission.
2. **Step 1, Student:** first and last name, date of birth, grade applying for, academic year, personal details. Click Continue to guardians. The draft is saved and gets its own address, so you can leave and come back.
3. **Step 2, Guardians:** primary guardian, relationship, phone number, address, and contact and local guardian details. If a brother or sister already studies here, click + Add a sibling and fill the relation, admission number or employee code, name and class. You can add up to 10. Click Continue to schooling.
4. **Step 3, Schooling:** previous school, qualifications, then what the family wants: an **elective** from each group, **activities**, a **bus route and stop** (always both), a **hostel** bed, a **fee group**. Upload the **required documents** in the checklist: each slot has Upload, Replace and Remove, and "needed" ones are marked until uploaded. Click Continue to review.

5. **Step 4, Review:** read the summary, tick the **consent** box and click Submit application. The button stays disabled until consent is ticked.

CHECK IT WORKED

The application appears under **Admission** with the stage **Under review**, and the enquiry shows as **Applied**.

WATCH OUT

- Submit fails if a required detail, a required document or the consent is missing. The message names what is missing.
- You cannot move an enquiry to "applied" any other way. The application form is where the required details are collected.
- Documents must be PDF, JPG, PNG or WebP, up to 5 MB each, at most 10 per application. The system looks inside the file; renaming a file does not fool it.
- An elective must belong to the grade chosen, one per group. A route needs a stop.

4.4 Test, interview and offer

1. Entrance Tests: schedule a test date for a submitted application; after the date, enter the marks (maximum marks must be above zero).
2. Interview Schedule: set date, time and panel (all three are required); after the interview, record the result.
3. Decide: **Approve** (needs the class applied for), **Waitlist**, or **Reject** (the applicant can be reopened later as an enquiry). The Waiting List entry shows waitlisted applicants.
4. An approved applicant has an **offer** with a confirm-by date (14 days by default). Admission Offers lists them; after the date the offer shows as expired.

WATCH OUT

A test or interview can only be scheduled for a **submitted** application. Marks and results cannot be entered for a date that is still in the future.

4.5 Enrol

1. On the approved applicant's row click Enroll. The button changes to **"Sure? Click again to enroll"**. Click it a second time.
2. A green message appears: **Enrolled as ADM-2026-xxxx; N fee item(s) billed**, together with the student's **login username and starting password**.
3. **Write the password down now.** It is shown only once. Hand it to the family; the student must change it at first sign-in.
4. If the family asked for a hostel bed, the message says what is left to do: the hostel desk must choose a room (Part 13).

WHAT ENROLMENT DID FOR YOU, IN ONE STEP

Student record	Created in the class applied for, with a generated admission number and every detail from the enquiry and application, including siblings.
Login	A student login with a starting password.
Fees	Every fee item in that class's structure billed, once. Fee group items chosen by the family are billed alongside.
Documents and photo	The application's documents become the student's documents (same names); the photo becomes the student's photo.
Choices	Elective subjects, activity registrations and the bus assignment are created.

CHECK IT WORKED

Open `Students` → `Enrolled Students`, find the child, open the details popup: subjects, bus, activities, documents and the sibling details are all there.

UNDOING A MISTAKE

If you enrolled the wrong person, delete the **student**. The applicant goes back to holding an offer, so nothing points at a student that no longer exists. A student with certificate requests cannot be deleted; mark them inactive.

PART 5 · ADMINISTRATOR

Students: records, logins, documents

WHO	WHERE	BEFORE YOU START
Administrator (teachers can read)	Students group	Classes and fee structure

5.1 Register a student directly (without an application)

1. Students → Enrolled Students → Register new student.
2. Required: first name, last name and the admission number (leave it blank and one is generated).
3. Choose the class. Tick the option to **bill the class fee structure** if you want fees raised now.
4. Fill what you know: parents, contact, address, previous school, siblings, remarks. Save.

WATCH OUT
If a student with the same name and date of birth exists, the system asks you to confirm before creating a duplicate. Look at the existing record first.

5.2 Photo and documents

1. Open the student's details popup.
2. Upload the **photo** (one per student; a new one replaces the old).
3. In the **document checklist** upload each required document. A badge shows when required documents are missing.

Photos are JPEG, PNG or WebP up to 1 MB. Documents are PDF or images up to 5 MB. Files are stored in the database, so backups contain them.

5.3 Create logins

FOR	WHERE	NOTES
Student	Students → Student Accounts	One login per student. Stops working when the student is made inactive. The password is temporary.
Parent	Parent Portal → Parent Accounts, or **Create parent login** on the student's profile	Can be filled from the father, mother or guardian details already on the student and links the child on save. One parent can be linked to several children.

5.4 Health, behaviour and clinic

Student Health Records holds blood group, allergies, regular medication and the emergency contact. Clinic Visits and Student Behavior record events against a student. Teachers and admins can use these.

5.5 Changing a student's class or electives

1. Edit the student and choose the new class, or open the details popup and change an elective directly.

2. The system removes electives that do not belong to the new class.

5.6 When a student leaves

1. Issue a **Transfer Certificate** (Part 15).
2. Set the student to **inactive**. Their login stops, they no longer appear in attendance sheets or ID card runs, and their history stays.

> **DO NOT DELETE A STUDENT WHO HAS HISTORY**
> Deleting hides the record. If the student has certificate requests, the system refuses. Inactive is almost always the right answer.

PART 6 · ACADEMIC COORDINATOR, TEACHERS

Academics: subjects, electives and timetable

6.1 Electives: how a student chooses

1. The class's elective subjects sit in **groups** such as "Second language".
2. A family picks one per group on the application, or the office sets it later in the student's details popup.
3. Exams then expect marks only for the student's own subjects, and ranks are worked out of those.

6.2 Teaching tools

PAGE	USE IT TO
Syllabus & Lesson Plans	Plan topics per class and subject and track their status.
Homework & Assignments	Set homework with a due date; the tracker shows who submitted.
Online Classes	Add a live class with its joining link; students and parents see the last week and what is coming.
Study Materials	Share links and materials by class and subject.
Academic Calendar, List of Holidays	Publish terms, events and holidays; they show in the portal.

6.3 Substitutions

1. `Timetable` → `Substitution Management`.
2. The page lists the periods of teachers on approved leave.
3. Pick cover. The system only offers teachers who are free: no lesson, no other cover, not on leave.

6.4 Timetable reports

`Timetable Reports` shows teacher workload, periods per class, room use and periods that still have no teacher. Check it before the term starts.

PART 7 · TEACHERS

Daily teaching: attendance, leave and alerts

WHO	WHERE	WHEN
Teachers (and admin)	Attendance group, My Class	Every school day, early

7.1 Mark attendance

1. Open `Dashboard` → `My Class`, or `Attendance` → `Mark Attendance`. A class teacher's page opens on their own class.
2. Check the date (today) and the class.
3. For each student choose **present**, **absent** or **late**. For a late student add the **arrival time** (like 08:15) and, if useful, a short note (up to 120 characters).
4. Save. The button tells you when there are unsaved changes.

CHECK IT WORKED
The dashboard tile "Present today" updates, and the parent of an absent child can see it in their portal. If automatic alerts are on, the guardian is notified.

WATCH OUT
You cannot mark a future date, or a student who is not in the class. A teacher can only open their own classes.

ON A PHONE
Teachers can mark attendance in the app: **Mark Attendance**, tap a student to cycle present, absent and late, then **Save attendance** (Part 20.4).

7.2 Correct a saved mark

1. Change the mark the same way and save, or use `Attendance Corrections`.
2. Give a **reason**. The system records the old value, the new value, the reason and who changed it.

7.3 Student leave

1. A parent applies in their portal (**Apply for Leave**) with dates and a reason. A student can also apply from their own portal.
2. You see it under `Attendance` → `Student Leave` and on My Class as "waiting for a decision".
3. **Approve**, or **Reject** with a reason (a reason is required).
4. `Student Leave Record` shows the history; `Leave Balances` shows days used.

RULES
Leave cannot be requested for dates already over. Overlapping pending or approved leave is refused. Leave that has already started cannot be cancelled.

7.4 Monthly, period and biometric attendance

- **Monthly Attendance**: a sheet for a class and month; every change must fall in that month.
- **Period Attendance**: attendance per period for a class and day.
- **Biometric Attendance**: card or fingerprint devices send marks directly; the page shows what arrived.

7.5 Parent absence alerts

1. **Attendance** → **Parent Absence Alerts**.
2. With **Automatic alerts on**, the system checks every few minutes and notifies guardians of students marked absent, once per absence.
3. You can also send a text for one absent student from this page.

> **IS IT REALLY SENDING?**
> Until the school's email and SMS credentials are set up, messages are only **recorded** in the history as "recorded only" and are **not delivered**. Ask the administrator to confirm under Settings → Integrations.

7.6 Reports

Reports → attendance for any date range and class. Students below the minimum (75% by default) are flagged. Use **Export** to download what is on screen.

PART 8 · EXAM CELL, TEACHERS

Exams: marks, results and report cards

Grade setup → Create exam → Enter marks → Results & ranks → Report card

WHO	WHERE	BEFORE YOU START
Admin creates; teachers enter marks	Examinations group	Subject map, students in the class

8.1 Grade setup (once)

1. Examinations → Grade Setup.
2. Add grades with a name (up to 10 characters) and the lowest percentage for each. The lowest grade must start at 0%, and no two grades can start at the same percentage.
3. Set the **pass mark** (0 to 100, 40% by default). Save; the button reads Saved until you change something.

8.2 Create an exam

1. Exams, Marks & Results → create: class, name, maximum marks, dates.
2. The tiles show all, upcoming, ongoing and completed exams from the dates.
3. Optional: Exam Groups combine several exams with weights (1 to 1000) into one result. An exam can only join a group of its own class.

8.3 Enter marks

1. On the exam row click **Marks**.
2. Type each student's mark in the box. For a subject taught as theory plus practical there are **two boxes**, each checked against its own maximum, with the total beside them.
3. Click Save marks. You see **Marks saved**. If you try to leave with unsaved marks, the system warns you.

WATCH OUT

- A mark cannot be higher than the maximum.
- Only students of the exam's class, and only subjects that class studies, are accepted.
- A teacher can enter marks only for the subjects assigned to them in the subject map. An admin can enter any.

ON A PHONE

Marks can also be entered in the app under **Enter Marks**. A subject taught as theory plus practical is entered on the website. Parents see the result under Exam → Exams & results.

8.4 Results, ranks and the merit list

1. Click **Results** on the exam. The tiles show students, passed, class average and top score; tabs show **Pass**, **Fail** and **Incomplete**.
2. Each student has a total, percentage, grade and rank. A student is ranked out of the subjects they take, so electives are fair.
3. `Merit List` shows the top students; it prints without the controls.

8.5 Print a report card

1. On the results row open the student's **report card**.
2. Check the school name, logo, student photo, marks table, total, percentage, grade, rank, result and attendance.
3. Click `Print`. The sheet prints cleanly with lines for class teacher, parent and principal signatures.

8.6 Revaluation

1. A parent can raise a request in the portal, or a teacher logs one under `Revaluation Requests`.
2. Only one request can be open per subject. The admin **accepts** (enters the revised mark and a note) or **rejects** (a reason is required).

`Holistic Progress Card` records non-academic areas (skills and habits) alongside marks.

PART 9 · ACCOUNTANT

Fees and payments

Fee structure → Billing → Payment → Receipt → Reports

WHO	WHERE	BEFORE YOU START
Accountant, administrator	Fees & Finance group	Fee structure per class

9.1 How fees reach a student

- **At enrolment**, every item in the class's fee structure is billed automatically.
- **Bill a class:** Fees & Payments → Bill a class bills every student of the class for the structure items. A student is never billed twice for the same item.
- **Add fee:** a single fee for one student (a student, a title and an amount above zero).
- Hostel, transport and library fines are billed through this same page, so everything one family owes is in one place.

The page shows tiles for **billed**, **collected**, **outstanding** and **overdue**, tabs by status, search and a class filter.

STATUS	MEANING
Unpaid	Nothing paid yet and not yet past the due date.
Partly paid	Some money received, balance remains.
Overdue	Not fully paid and the due date has passed.
Paid	Paid amount equals the amount.

Status is worked out by the system from the amounts and the date. You never type it.

9.2 Take a payment

1. Fees & Payments: find the fee (search by student name, admission number or phone).
2. Click Pay. In the popup enter the amount and choose the method (cash, card, bank transfer and so on; only the methods switched on in Settings appear).
3. Save. The **receipt** opens with its own number.
4. Click **Print** and give the receipt to the payer.

CHECK IT WORKED

The fee's balance drops and its status changes to Partly paid or Paid. Payment History & Receipts lists the payment and you can reprint the receipt later.

WATCH OUT

The system will not take more than the balance. If part payments are switched off in Settings, only the full balance is accepted.

ON A PHONE

An accountant can take a payment in the app. A parent sees billed, paid and still to pay, and the receipts, under Fees → Fees & payments, but pays at the office.

9.3 Discount, fine and refund

1. On the fee click **Discount** or **Fine**. A **reason is required** (for example "Sibling discount", "Scholarship").
2. A discount cannot bring the amount below what has already been paid.
3. To refund, open the payment in Payment History and choose refund. The refund is recorded against that payment.
4. **Late fines:** the late fines action bills fines for overdue fees in one go.

NEVER TRY TO "FIX" A FEE BY DELETING IT

A fee with any payment history, even fully refunded, cannot be deleted, moved to another student or re-priced. Use a discount or a fine. If you billed the wrong student and nothing was paid, delete the fee and bill the right student.

9.4 Fee reminders

1. `Fee Reminders` lists guardians with overdue fees.
2. Send the reminder. The same guardian is not reminded again for 24 hours (the cool-down is in Settings).

9.5 Other income, expenses and reports

- `Other Income` and `Expenses`: record non-fee money in and out, with a category.
- `Financial Reports`: tabs for attendance, **Income & expenses** (with collection by method and expenses by category) and **Fee defaulters**. Each has tiles, search and **Export**.

END-OF-DAY ROUTINE

Open Payment History, filter to today, compare the total with the cash drawer and the bank slips, and Export for the records.

PART 10 · HR (ADMINISTRATOR), ACCOUNTANT

Staff and payroll

10.1 Register a staff member

1. Staff & HR → Staff Directory → register new staff member.
2. Fill employment (staff number is generated if blank, designation, department, type, joining date), personal and identity details, contact and address, qualification and experience, emergency contact and bank details.
3. Upload the **photo** and the **required staff documents** (Staff Documents): contracts, certificates, ID proofs. PDF or image, up to 5 MB.

WHO SEES WHAT
Identity, address and emergency data are visible to administrators only. Bank details are visible to administrators and accountants. Other roles see names, designation, department, contact and joining date.

WATCH OUT
Staff with payslips, reviews or documents cannot be deleted. Mark them inactive instead.

10.2 Staff attendance and leave

- Staff Attendance and Monthly Staff Attendance record and review daily presence.
- Staff Leave : a staff member applies; the admin approves or rejects (reason needed). Staff Leave Balance shows allowances and days used. Leave types and yearly allowances are in Settings.
- Approved leave feeds **Substitutions** automatically.

10.3 Payroll, every month

Salary terms → Generate payslips → Admin approves → Paid

1. **Accountant:** Payroll → **Salary terms** tab: set each staff member's basic salary, allowances and deductions. Basic salary is required.
2. **Accountant:** pick the month and generate payslips. Deductions cannot be more than the gross salary.
3. Check the tiles: staff on payroll, net payroll, paid, and waiting for approval.
4. **Administrator only:** open a payslip and click **Approve & mark paid**. The approver's name is recorded on the payslip.

WATCH OUT
The accountant prepares, the administrator approves. This split is deliberate and enforced. A paid payslip cannot be deleted.

10.4 Recruitment

1. Recruitment : create an **opening** with job title and number of vacancies.

2. Add **applicants** and move them: applied, shortlisted, interviewed, offered, hired.
3. Only an **offered** applicant can be hired. Hiring creates the staff profile and closes the opening when all vacancies are filled.

10.5 Performance reviews

1. `Performance Reviews`: choose the staff member and give each of the four ratings from 1 to 5 (every rating is required). The average is worked out for you.
2. When final, **finalise** the review. A finalised review cannot be changed or deleted.

PART 11 · LIBRARIAN, TEACHERS

Library

Categories → Books → Cards → Issue → Return → Fines

11.1 Books and categories

1. Library → Book Categories: add categories first. A category with books cannot be deleted.
2. Books & Loans → add a book with title, author, category and number of copies. You can also load books from a spreadsheet (Part 3.9).

11.2 Library cards

1. Library Members → issue a card: card number, valid-until date, **books allowed at a time** (1 to 50) and status (active or suspended).
2. A student with a card is held to its limit. A student without a card can still borrow unless the school requires a card in Settings.

11.3 Issue and return

1. Books & Loans → **Issue a book**: search the student, choose the book and the loan period (14 days by default, never more than 90).
2. When it comes back, click **Return** on the loan.
3. If it is late, a fine (per day, set in Settings) is billed to the student as a normal fee, once.

THE SYSTEM WILL REFUSE WHEN

- the student is inactive, or already has this book on loan, or is at the card limit;
- the card is suspended or expired;
- no copy is free, or the free copies are being held for students who reserved first.

ON A PHONE

A student sees books on loan and due dates in the app under Library. Staff can mark a book returned there.

11.4 Reservations

1. Book Reservations → reserve a book **only when no copy is free**.
2. When a copy is returned it is held for the first person in the queue, so no one can jump ahead.

11.5 Fines from earlier returns and reports

On Books & Loans use **Bill fines from earlier returns** to bill late returns made before fine billing was switched on; running it again does not bill twice. Library Reports shows the most borrowed books and titles per category.

PART 12 · TRANSPORT MANAGER

Transport

Vehicles → Drivers → Routes & stops → Assign riders → Fees → Attendance

12.1 Set up

1. **Transport** → **Vehicles**: registration number and seats.
2. **Drivers & Attendants**: add the staff who run the buses.
3. **Routes**: name, vehicle and monthly fee. **Stops**: stops in order; a stop belongs to one route.

12.2 Assign a student to a bus

1. **Student Route Assignment** → assign: choose the student, the **route and stop** (the stop must be on that route), the trips used (both, pickup only or drop only) and who is authorised to collect the child.
2. Editing the row moves the rider.

> **RULES**
> A vehicle never carries more than its seats. Only active students can use transport. A route or stop with riders cannot be deleted.

12.3 Fees, attendance and tracking

- **Transport Fees**: bills the monthly route fee through the normal fee flow, with a confirmation before billing.
- **Transport Attendance**: pick route, trip (morning or evening) and date; mark each rider **boarded** or **absent**; one Save button.
- **Bus Tracking**: live position from the bus GPS units. Parents see it in their portal.
- **Vehicle Maintenance** and **Transport Reports** (riders, vehicle use, route income, maintenance due, export).

PART 13 · HOSTEL WARDEN, ADMINISTRATOR

Hostel

Hostels → Rooms → Allocation → Roll call → Mess → Fees

13.1 Rooms and allocation

1. **Hostels**: add each hostel and its type (boys or girls). **Hostel Rooms**: rooms with beds and monthly fee.
2. **Room Allocation** → allocate: choose the boarder, the room, the **bed number** (unique in the room), the meal plan, the security deposit, the local guardian and whether the parent consent form was received.
3. To move a boarder, edit their allocation.

FOLLOW-UP FROM ENROLMENT
If a family asked for a hostel bed on the application, enrolment leaves it as a task because a bed needs a room. Do it here.

RULES
Capacity and boys or girls checks apply. Only active students can live in the hostel. A room with residents cannot be deleted.

13.2 Night roll call

1. **Hostel Attendance**: choose the hostel and date.
2. Mark each boarder **present**, **absent** or **leave**. Click Save; it reads Saved until you change something.

13.3 Mess menu

1. **Mess Management**: choose the hostel. Click **+ Add meal** or **+ Add** in a cell.
2. Pick the day and meal (breakfast, lunch, snacks, dinner) and type the items. Saving the same day and meal again **replaces** the entry.

13.4 Visitors

1. **Visitor Log** → **Check in a visitor**: pick the boarder (only boarders can be visited), visitor name, relation, phone and purpose.
2. When they leave, click **Check out**. The "Inside now" tile reminds you who is still in.

WHAT STUDENTS AND PARENTS SEE
A boarder's room, bed, warden, local guardian, the mess menu, the night roll call and visitors all appear in the school app (Part 20). It is read only, and it shows what you record on these pages, so keep them current.

13.5 Fees and reports

Hostel Fees bills the monthly fee through the normal fee flow, with a confirmation first. **Hostel Reports** shows boarders, income, full rooms, tonight's roll call and occupancy, with export.

PART 14 · STORE KEEPER (ADMINISTRATOR), TEACHERS

Inventory

`Categories` → `Items` → `Suppliers` → `Purchase order` → `Receive` → `Issue`

14.1 Items and stock

1. `Item Categories`, then `Inventory Items` and `Suppliers`.
2. Stock only changes through **movements**: `Stock In` adds, `Stock Out` issues. You cannot issue more than is in stock.

14.2 Purchase orders

1. `Purchase Orders` → new order: supplier, expected date, and the lines (each item only once, a whole quantity above zero, a valid cost).
2. When the goods arrive click **Receive**. Every line is added to stock **exactly once**; receiving twice is not possible.

14.3 Requests from teachers

1. **Teacher:** `Inventory Requests` → new request: item, quantity and **what it is needed for** (required).
2. **Administrator: Approve** (you may issue fewer than asked; stock is issued through the normal stock-out rules) or **Reject** (a reason is required).
3. Teachers see only their own requests. A request can be withdrawn before a decision.

14.4 Assets and reports

- `Asset Register`: individually tagged assets with location, cost and status. `Asset Maintenance` keeps the service log and a 30-day service-due list. An asset with maintenance history is marked **disposed**, never deleted.
- `Stock Reports`: low stock list and stock value at the latest cost.

PART 15 · ADMINISTRATOR

Certificates and ID cards

15.1 Certificates

Request → Issue (or reject) → Print

1. Documents & Certificates → Requests & Issued Register. Requests come from a parent in the portal (bonafide, character, fee certificates) or are raised here at the office. A **transfer certificate** comes only from the parent or the office.
2. Open the request and click **Issue**, or **Reject** with a reason.
3. Click **Print**.

WORDING

Document Templates sets the wording of each certificate with placeholders such as the student's name. The wording in force is **frozen into the certificate when it is issued**, so reprinting later never changes it.

WATCH OUT

Only one open request per student and certificate type. An issued certificate stays in the register permanently. A student with certificate requests cannot be deleted.

ON A PHONE

Parents and students ask for a bonafide, character or fee certificate in the app under Administration → Certificates. Staff approve or reject it there or on the website.

15.2 ID cards

1. Settings → ID Card Design: colours, logo, academic year, signature and footer text, and which details show. One design serves student and staff cards; the preview updates as you change it.
2. To print for a whole class: Documents & Certificates → ID Cards, choose the class from the list, check the cards, click **Print N cards**.
3. One card: from the student's details popup, or a staff card from the Staff page.

CHECK IT WORKED

The page shows one card for every **active** student in the class, with photo, name, admission number and class.

PART 16 · PARENTS AND STUDENTS

The parent and student portal

Use this part to train parents and students, or to answer their questions at the office.

> **THE SAME PORTAL ON A PHONE**
> Parents and students can also use the school app (Part 20). It shows the same records, and it signs in with the **mobile number** kept on the parent or student record, so check that number when you create the account. The school must be connected to the registry (Part 21) first.

16.1 First sign-in

1. The family receives a username (or email) and a temporary password from the school.
2. They sign in and are asked to set their own password first.

16.2 What a parent can do

MENU ENTRY	WHAT THEY SEE OR DO
Dashboard	Thirty-day attendance and the fee position for each child at a glance.
Child Profile, Attendance, Class Timetable	Everything recorded about the child, day-by-day attendance, and the weekly timetable.
Homework, Online Classes, Learning Materials	What was set, the joining links for live classes, and shared materials.
Exams & Results, Fees & Payments	Marks, grades and report cards; fees, balances and receipts.
Library, Activities, Transport Tracking	Books on loan, clubs and events, and the bus position.
Notices, Messages, Events & Calendar	School announcements and the calendar.
Apply for Leave	Dates and a reason; the class teacher decides.
Certificates & Documents	Request a bonafide, character, fee or transfer certificate; see when it is decided.
Feedback & Grievance, Help & Support	Send a concern to the school and see replies.

16.3 What a student can do

The same pages for their own record, read-only. A student **can** apply for leave and withdraw their own request, and can request a certificate (the office decides). They cannot change anything else. A transfer certificate is requested by the parent or at the office.

COMMON QUESTIONS

- **"I cannot see my other child."** The child must be linked to the parent account. The office links them under Parent Portal → Parent Accounts.
- **"The app says my number is not found."** The mobile number on the parent or student record is missing or different. Correct it on the record; the app finds the person within a moment. A student can also sign in with the admission number.
- **"My student cannot sign in."** The account stops working when the student is made inactive.
- **"Nothing happens on a page."** Ask them to sign out and in again; if it persists, tell the administrator the page name.

16.4 What the office watches

- `Parent Login Activity` : last sign-in per parent and a flag for accounts that never signed in. Call those parents.
- `Parent Requests` : leave, certificate and revaluation requests from the portal, with a link to decide each.
- `Login History` (User Management): the last 300 sign-in attempts, kept 180 days. Never shows passwords.

PART 17 · ADMINISTRATOR

Messages, notices and alerts

17.1 Notices

1. Communication → Notices → add a notice, choose who it is for (everyone, students, staff and so on) and publish.
2. It appears in the portal's Notices and on the dashboard.

> **IN THE APP**
> A notice published here appears in the app under Notices, and the push notification reaches the phone. Parents see what you write, so read it before you publish.

17.2 Email and SMS

1. Send Email / Send SMS / Parent Messages / Staff Messages: choose the audience (all parents, one class, one number, all staff, a user group).
2. Write the message or pick a Message Template. An email needs a subject.
3. Send. Check Communication History for the result of each message.

> **ARE MESSAGES REALLY DELIVERED?**
> Until email (SMTP) and SMS (Twilio) credentials are set in the server settings, the system runs in **log-only mode**. The history shows **"recorded only"** and **nothing is delivered**. Open Settings → Integrations: it shows which credentials are set (never the values) and can send a test message. Do this before the first real alert.

> **PHONE NUMBERS**
> A phone number needs a country code (for example +91...), or the school sets a default country code. An invalid number is refused before sending.

17.3 Push notifications

Browser alerts: each person turns them on for their own device from the page; they need a secure connection (https) or localhost. An admin sends them from Push Notifications.

17.4 Feedback and grievances

Any staff login can send feedback. Only an administrator answers. Parents send theirs from the portal. The **grievance ladder** escalates unanswered items so they are not forgotten. Staff can also write to the administrator from **Help & Support** → Submit a Support Request.

PART 18 · ADMINISTRATOR

Year end: promotion

WHO	WHERE	WHEN
Administrator	Students → Year-end Promotion	After results are final

BEFORE YOU START

Take a manual backup first (Part 19). Promotion changes many records at once.

1. Create next year's classes if they do not exist, and add the new academic year.
2. Open `Students` → `Year-end Promotion`.
3. Choose the **from class** and the **to class** (they must be different).
4. To hold some students back, select only the students who should move.
5. To **graduate** a class, leave the target empty: the students become **inactive** (graduated or left).
6. Confirm. The result shows how many moved.
7. Do the **highest class first**, so a class is empty before the one below moves up.
8. When all classes are done, make the new academic year the current one in `Academic Years`.

CHECK IT WORKED

The ID cards page shows the students in their new class. Electives that do not belong to the new class are removed; set the new ones in the student's details or at the start of term. Former students are listed in `Alumni`.

PART 19

Routine, backups and when something looks wrong

19.1 The routine

WHEN	WHO	WHAT
Every school day	Teachers	Mark attendance early; enter homework and marks.
Every school day	Admissions	Follow up enquiries due today; review new applications.
Every school day	Accountant	Record payments; reconcile the day's receipts with the cash and bank.
Every week	Administrator	Look at the Dashboard priorities (unmarked classes, overdue fees); read the Audit log; copy the backup folder off the server.
Every month	Accountant, administrator	Payroll; hostel and transport fee runs; fee reminders; administrator approves payroll.
Every term	Exam cell	Create exams, enter marks, publish results and report cards.
Year end	Administrator	Backup, promotion, new academic year.

19.2 Backups

1. **Automatic:** the system writes a backup file about once a day to the server's **backups** folder and keeps the newest 14.
2. **Copy that folder somewhere else** (another disk, a cloud drive). A backup on the same disk as the database does not survive that disk failing.
3. **The global registry** (Part 21) has its own database, **school_erp_global**, and a signing key. Back both up: they hold every school's app logins. Losing the key means every school must be re-connected.
4. **Manual:** `Settings` → `Backup & Restore` → download. The file holds every table, including uploaded photos and documents, and password hashes. Keep it private.
5. **Restore** replaces **all** data in one step: you must type **RESTORE**, the file must be a School ERP backup that contains user accounts, and any error rolls everything back. Practise this on a test copy before you ever need it.

19.3 When something looks wrong

WHAT YOU SEE	WHAT IT USUALLY MEANS AND WHAT TO DO
"Please change your password first"	A temporary password. Open the change-password page and set your own.
"Submit the student application first"	An enquiry cannot skip the application form. Use **Apply** on the enquiry.

Application will not submit	A required detail, required document or the consent is missing. The message names it.
"Only approved applicants can be enrolled"	Approve the applicant first (it needs the class applied for).
Enroll seems to do nothing	It needs two clicks. The first arms the button ("Sure? Click again").
Cannot delete a student or fee	It has history (certificate request, payments). Mark the student inactive; use a discount or fine for a fee.
Marks refused	Over the maximum, wrong class or subject, or the subject is not assigned to this teacher.
Teacher cannot see a class	The login email must equal the staff profile email, and the teacher must be the class or subject teacher.
Payment refused	More than the balance, or part payment is switched off, or the method is not enabled.
Messages "recorded only"	Email or SMS is not configured. See Integrations.
Phone number refused	Add the country code.
A page shows "Something went wrong on this screen"	Nothing you saved is lost. Reload the page. If it repeats, tell the administrator the page name and what you clicked.

REPORTING A PROBLEM WELL

Write down: who you are, the page, what you clicked, the exact message, and the time. The Audit log and Login History can then be checked against it.

PART 20 · PARENTS, STUDENTS, TEACHERS

The mobile app

One app serves every school. Nobody chooses a school: the app works it out from the mobile number. This part is for the people who use the app and for the staff who help them.

WHO	WHERE	BEFORE YOU START
Parents, students, teachers, administrators, accountants	The school app on a phone	The school has connected to the registry (Part 21)

20.1 Signing in

1. Open the app. Type your **mobile number** (any way you write it: **98000 00001**, **+91 98000 00001** or **098000 00001**) or your **email**. A student can also type the **admission number**.
2. Type your password and press Sign in.
3. The app finds your school and your role (student, teacher, parent, administrator or accountant) and opens your home screen.
4. If you were given a **temporary password**, the app asks you to choose your own first. Use at least 8 characters.

> **THE SAME LOGIN AS THE WEBSITE**
> The password is the school's password for you. If you change it in the app, the website accepts the new one a moment later, and the other way round.

WHEN ONE NUMBER IS MORE THAN ONE ACCOUNT

A parent and their child may share a phone number, or a teacher may also be a parent at another school. After the correct password the app shows **Choose an account**: tap the school and role you want. Both accounts keep working; you simply pick.

SWITCHING PERSON

Open **Profile** and press **Switch account**. Do this on a shared phone, and whenever someone else needs to sign in.

20.2 Parents and students: the home screen

- **Top bar:** a greeting, **search** (finds a tile by name), **notices** (the bell) and **sign out**.
- **Frequently Used:** the four tiles you open most. It starts with the first four and learns your habits.
- **Two cards** you swipe sideways: **Attendance** as a circle with the percentage (red when under 75%), and **Payment Due** with the amount still to pay. A parent with several children taps a child's name above the cards.
- **Sections** of icons, like the school menu: **Academic** (timetable, calendar, homework, learning materials, online classes, attendance, student leave, leave balance), **Exam** (exams and results, revaluation requests), **Fees**, **Hostel** (room and warden, mess menu, night roll call, visitors), **Library**, **Administration** (certificates, feedback and grievance, messages) and **Other services** (transport, notices, activities, change password).
- **Bottom bar:** Home, **Time Table**, **Ask Query** (feedback and grievances, with a button to send a new one) and Profile.

20.3 Things parents and students do in the app

I WANT TO	DO THIS
See today's attendance	The ring on the home screen, or **Academic** → **Attendance** for each day of a month.
See what is due and pay history	**Fees** → **Fees & payments**: billed, paid, still to pay, and the receipts. Payment itself is at the school office.
See marks and the report card	**Exam** → **Exams & results**, then tap an exam to see every subject.
Ask for leave	**Academic** → **Student leave**: pick the type, the dates (YYYY-MM-DD) and a reason, then **Send request**. A request that is still pending can be withdrawn.
Ask for a certificate	**Administration** → **Certificates**, then **Request a certificate**: bonafide, character or fee. A transfer certificate is asked for at the office.
Tell the school something	**Ask Query** → **Send feedback**: choose feedback or grievance, the topic, and write it. Replies appear in the same list.
Join an online class or open study material	**Academic** → **Online classes** or **Learning materials**, open the item, press **Join class** or **Open material**.
Check the hostel	**Hostel**: room, bed, meal plan, warden's phone, the weekly mess menu, the night roll call of the last month, and who visited. A day scholar sees "Not a boarder".
Give consent for a trip	**Other services** → **Activities**, open the activity, **Give consent** or **Decline**.

PULL DOWN TO REFRESH

Every page loads when you open it. If something was changed at the school a moment ago, pull the page down to reload it.

20.4 Teachers, administrators and accountants

- **Home** shows **Today's Summary** (present, absent and classes not yet marked; an accountant sees fees due and collected) and a grid with a tile for each area you may open. **My Class**, **Mark Attendance** and **Enter Marks** come first for teachers.
- **Mark attendance:** choose the class and the day; **tap a student** to cycle present, absent and late; press **All present** to start from everyone present; then **Save attendance**. Changing a past day asks for a reason.
- **Enter marks:** choose the exam and the subject, type each mark, **Save marks**. A subject taught as theory plus practical is entered on the website.
- **My class:** today's roll, who is absent, leave waiting for a decision. Tap a status to call the guardian.
- **Decisions on the go:** approve or reject student and staff leave; approve or reject item requests and revaluations; issue or reject certificates; take a fee payment; mark a library book returned; check a hostel visitor out; approve a payslip (administrator only); enrol an applicant who has an offer.
- **Messages and notices:** an administrator can publish a notice and message parents by SMS or email from **Communication**.

What each person sees is set by the school: the tiles, their names and icons, their order and who may see them are edited on the website under `Settings` → `Mobile App Menu` (administrator): rename a tile, choose an icon or upload a picture, move it up or down, limit it to some roles, or hide it. The app picks the change up the next time it is opened.

20.5 Before you tell families about the app

- The school appears on the registry admin page with a recent **Last report** (Part 21).
- Every parent's, student's and teacher's mobile number is correct on their record.
- Sign in with one test parent, one student and one teacher on a real phone and open Home, Attendance and Fees.
- The school's server address is reachable from outside the school Wi-Fi (https).

20.6 When something looks wrong

WHAT YOU SEE	WHAT IT MEANS AND WHAT TO DO
"Invalid mobile number, email or password"	Check the number or email and the password. The same message appears for an unknown number, so it does not reveal who has an account. Ask the school office to confirm the mobile number on your record.
"Too many failed attempts. Try again in N minute(s)"	Wait. After eight wrong tries for one number or email the app waits 15 minutes. Do not keep trying.
"Cannot reach the sign-in service"	Your phone has no connection, or the registry is down. Try mobile data or Wi-Fi; if it persists, tell the school.
"That sign-in has expired" or "was already used"	The pass the registry gave is valid for two minutes, once. Sign in again.
Signs in but the school does not open	The school's server is not reachable from the phone. Tell the school office.
My number works for someone else too	You will be asked to choose the account. If the password belongs to only one of them, only that one is offered.
"Please change your password first"	A temporary password: choose your own.
A new login does not work yet	A new login reaches the registry within a moment, and the full list is sent every 15 minutes. Wait, or ask an administrator to press **Sync now** (`POST /api/global-sync`).
Hostel shows "Not a boarder"	The student has no room. The hostel warden allocates one under Hostel → Room Allocation.

PART 21 · ADMINISTRATOR AND IT

Connecting schools to the app

Person types mobile + password → Global registry finds school and role → App connects to that school → School signs them in

Each school keeps its own server and database. A small separate service, the **global registry**, knows every school and every login, so one app can serve all of them. It stores each school's name and address, and for each login the role, name, mobile number, email, admission number and **password hash**. Marks, fees, attendance and everything else stay with the school.

WHO	WHERE	NEEDS
Administrator or IT person running the registry	The registry's admin page: `http://<registry>:4100/admin/`	The admin key (`GLOBAL_ADMIN_KEY`)

21.1 Adding a school

1. Open the registry's admin page and enter the **admin key**. (It is kept in that browser tab only, and cleared when you press **Lock**.)
2. Press + Add a school. Enter the **code** (short, lower case, easy to say: **greenfield**), the **name**, the city and state, and the school's **API address** (for example **https://erp.greenfield.edu/api**).
3. Leave **Check that the school's server answers** ticked, so a typo is caught now. Press **Save**.
4. A box shows the school's **key** and three lines to paste into the school's server settings. **It is shown once.** Copy it before you close the box.
5. On the school's server, open `server/.env` and add:
   - `GLOBAL_URL` (the registry's address, ending in `/api`)
   - `GLOBAL_CLIENT_CODE` (the school's code)
   - `GLOBAL_CLIENT_KEY` (the key)

   Restart the school's server.
6. Ten seconds later the school reports all its logins. On the admin page the school's **Logins** count fills in and **Last report** shows the time.

> **CHECK IT WORKED**
> The school's row shows a green time such as "2 min ago" and its number of logins. Press **Check** to confirm the registry can reach the school's server; it reports how long it took.

21.2 Day to day

BUTTON	WHAT IT DOES
Check	Asks the school's server whether it answers. Use it when parents say they cannot get in.
Edit	Change the name, city, API address or logo. The code does not change.

New key	Makes a new key and cancels the old one. The school's server stops reporting until the new key is in its settings. Use it if a key may have leaked.
Switch off / on	A school that is switched off is not found and its people cannot sign in through the app. Nothing is deleted.
Remove	Deletes the school and all its logins from the registry after you type its code. The school's own server and data are untouched. Its logins cannot sign in until it is added again.

The four tiles at the top show how many schools exist, how many are active, how many logins in total, and **Not reporting**: active schools that have never reported or have been silent for over an hour. A school normally reports within seconds of a change and every 15 minutes at the latest. If one is not reporting, check its server is running and its three settings are right.

21.3 Rules to remember

- **The school stays the source of truth.** Create logins and change passwords at the school (website). The registry follows within a moment. A login deleted at the school is switched off in the registry at the next full report.
- **Where the mobile number comes from:** a teacher's number from the staff profile, a parent's from the parent profile, a student's own phone or else their guardian's phone. An administrator without a staff profile has no phone and signs in by email. Keep these numbers correct: the app finds people by them.
- **Two schools, one number** is fine: the person chooses the account after signing in.
- **Safety:** the registry holds password hashes for every school. Protect its database like a school's own, serve it and every school over **https**, keep the admin key secret, and give the database a login of its own.
- **Backups:** back up the registry database (**school_erp_global**) and its signing key (`global/keys/private.pem`, or `GLOBAL_PRIVATE_KEY`). Without the key, every school would have to be re-connected.

> **QUICK REFERENCE**
> Admin page: `http://<registry>:4100/admin/`. School settings: `GLOBAL_URL`, `GLOBAL_CLIENT_CODE`, `GLOBAL_CLIENT_KEY`. Registry database: **school_erp_global**. Reports: within seconds of a change, every 15 minutes at the latest.

21.4 When something looks wrong

WHAT YOU SEE	WHAT TO CHECK
The admin page says "That key is not right"	The key is `GLOBAL_ADMIN_KEY` in the registry's settings. If it still has the example value the admin page is switched off on purpose.
Adding a school fails: "did not answer"	The address is wrong, the school's server is down, or this computer cannot reach it. Fix it, or untick the check to add it anyway.
Last report says Never	The three `GLOBAL_*` settings are missing or wrong on the school's server, or it has not been restarted. Its log says "Global registry: N logins reported" when it works.
A school's logins are far fewer than expected	Only logins with an email, mobile number or admission number can sign in. Check the staff, parent and student phone numbers.

People get "Invalid ..." though the password is right	Their login may not have reached the registry yet, or the number on their profile differs from the one they type. Ask an administrator to press **Sync now** at the school (`POST /api/global-sync`), then try again.

PART 22 · TRAINER

Trainer's plan, exercises and sign-off

Run the sessions on **demo data** in a rehearsal copy, never on live records. Load it with `npm run seed:demo --prefix server` and clear it with `npm run seed:demo:remove --prefix server`.

22.1 Suggested sessions

#	SESSION	WHO ATTENDS	PARTS	TIME
1	Getting started	Everyone	1, 2	1 h
2	Setup and data loading	Administrators	3	3 h
3	Admissions	Admissions team	4, 5	3 h
4	Teaching day	All teachers	6, 7, 8	3 h
5	Fees and accounts	Accountants	9, 10 (payroll)	3 h
6	Staff and HR	HR, administrators	10	2 h
7	Library, transport, hostel, inventory	Each desk	11 to 14	2 h each
8	Certificates, portal, messages	Office staff	15 to 17	2 h
9	Routine, backups, year end	Administrators	18, 19	2 h
10	The mobile app: signing in, home screen, everyday tasks	Parents, students, teachers	20	1 h
11	Connecting schools to the app	Administrator, IT	21	1 h
12	Full rehearsal: one family through everything	Everyone	All	half day

22.2 Hands-on exercises

EXERCISE A: ONE FAMILY, WHOLE PROCESS (SESSION 12)

1. Record an enquiry for a child; plan a follow-up.
2. Start the application; add a sibling; upload the required documents; submit.
3. Schedule a test and an interview; record the results; approve; make the offer.
4. Enrol; note the student's login password; check fees were billed.
5. Pay the fee in two parts; print both receipts.
6. Create a parent login; sign in as the parent and look at fees.
7. Mark attendance for the class; enter marks for an exam; print the report card.
8. Raise a certificate request as the parent; issue it at the office.
9. Promote the class and check the ID card.
10. On a phone, sign in to the app with the parent's mobile number; pick the right account if asked; find the fee, the report card and the hostel details.

EXERCISE B: BREAK IT ON PURPOSE (ALL SESSIONS)

- Try to submit an application without a required document. Read the message.
- Try to pay more than the balance. Try to delete a fee that has a payment.
- Enter a mark higher than the maximum.
- Try to issue a book that is already on loan to the same student.
- Try to enrol an applicant who has not been approved.
- In the app, sign in with a wrong password, and with a number nobody has: read the message.

The aim is for staff to meet each refusal in training, so it does not frighten them in real use.

EXERCISE C: RECOVER (ADMINISTRATORS)

- Delete an enquiry, find it in the Deleted tab, restore it.
- Correct a saved attendance mark and find the correction record.
- Download a manual backup. On a **test copy**, restore it.

22.3 Before going live

- ☐ Admin password, secret key and database password changed from the examples.
- ☐ School profile, academic year, classes, subject map, staff and fee structure filled in; the Setup guide is all ticked.
- ☐ Required document lists decided in Master Data.
- ☐ Email and SMS credentials set, and a test message delivered (Settings → Integrations).
- ☐ Teacher logins created, with the same email as each staff profile.
- ☐ Backup folder is copied off the server on a schedule; one restore has been practised on a test copy.

- ☐ The school is connected to the global registry: its **Last report** is recent and a test parent, teacher and student can sign in on a phone with their mobile numbers.
- ☐ Mobile numbers on staff, parent and student records are correct.
- ☐ One real class rehearsed end to end; what the pilot showed has been fixed.
- ☐ Everyone has changed their temporary password.
